Introduction

This audio will help you to focus and concentrate, boosting your mental activity and velocity. It also contains an antidepressant component that will help you to balance your mood and stabilize your emotions.

Description

This is a binaural sound of mental training category, this means that its effects are cumulative. The periodic use of this sound causes the brain waves to vibrate at the desired frequency even without the existence of the sound. In other words, it makes the effect last not only for the moment of listening to the audio but will also be produced naturally by our brain.

This audio is not specifically designed for listening while reading, as said before, it's a binaural audio of mental training category. It trains your brain to increase mental activity and velocity, to concentrate easily at any moment, and it also has an antidepressant component that produce happiness and balances our mood. Mental training category audios are much efficient if you lay down, close your eyes and relax while you are listening to the audio session. If you choose to listen to this audio while reading, the effects on your brain will be the same during the session but not as effective as a mental training. If you want to train your brain to achieve this states it's better to lay down, close your eyes and relax.

How to use it

This sound can be used at any time you consider necessary. For it to have a better effect, you must be comfortable and focused only on the sound, in a place where you feel comfortable and without distractions.

Make sure that you are not going to be disturbed during the audio session. Go to the toilet, drink water if you need to and assure that you have no pending things to do while listening to the audio therapy.

During the session you must be as relaxed as possible, any worry that you might have may interfere with the pattern of brain waves of the sound and decrease or even null the desired results.

This session requires the use of headphones. It is very important to use your headphones in the right way, always using the right channel for the right ear and the left channel for the left ear. This is because the audio might have information for the right hemisphere of the brain or for the left hemisphere in each channel.
